

Why is DEF system tampering a bad idea?

WARNING

Modifying or removing emissions control systems degrades air quality, may void the equipment's warranty and is illegal in the U.S.

Keeping DEF at the manufacturer's settings protects the environment, preserves your warranty and respects the law.

**It's your equipment.
It's your risk.
It's your decision.
It's your fine.**

Who pays the bill for ECU tuned equipment?

WARNING

Altering farm equipment software to boost power may void your warranty, accelerate engine wear and shortens the operating life.

Who pays?

The farmer who loses a warranty and needs repairs. The farmer, maybe a neighbor, who unknowingly buys used equipment that's been modified.

When equipment is ECU tuned, sooner or later,
...a FARMER pays.
