

# Who pays the bill for ECU tuned equipment?

**WARNING**

Altering construction equipment software to boost power may void your warranty, accelerate engine wear and shorten operating life.

Who pays?

The contractor who loses a warranty and needs repairs. The contractor, maybe a neighbor, who unknowingly buys used equipment that's been modified.

When equipment is ECU tuned, sooner or later, **...a CONTRACTOR pays.**

# Why is DEF system tampering a bad idea?

**WARNING**

Modifying or removing emissions control systems degrades air quality, may void the equipment's warranty and is illegal in the U.S.

Keeping DEF at the manufacturer's settings protects the environment, preserves your warranty and respects the law.

**It's your equipment.  
It's your risk.  
It's your decision.  
It's your fine.**
